Pre-Conference: Investigational Drug Service

This 3.5 hour pre-conference will be focused on the following:

1. Describe practice models for pharmacists involved in the management of patients on clinical trials
   a. Define the role and responsibilities of IDS pharmacists, clinical pharmacists, and research pharmacists
   b. Identify common investigational practice gaps pharmacists can impact
2. Managing IDS pharmacy services across multiple sites
   a. Discuss the challenges of managing IDS pharmacy services across multiple sites
   b. Review strategies for optimizing workflow when managing IDS pharmacy services across multiple sites

This session's speakers will be asked to also collaborate with the speaker presenting on the ADCC Pharmacy Committee on IDS Standards and Procedures

USP 800

Interested in having two speakers one to present on the non-facilities related to compliance and one to present on the facility on compliance

Non-Facilities:
- Identify key requirements for non-facility compliance with USP <800>
- Describe strategies for performing risk assessment and approving its use in an institution
- Detail operational changes and implementation of non-facility compliance measures

Facilities:
- Identify key requirements for facility compliance with USP <800>
- Outline construction design options that can be utilized in inpatient and outpatient facilities to ensure compliance
- Provide a checklist of items required for construction to ensure operational plans are executed appropriately
- Discuss considerations for working with a third party consultant to optimize construction plans

Position Justification

Interested in having two speakers, one to present focusing on academic medical center and the other to focus on community oncology practice

Academic Medical Center:
- Explain key concepts in oncology pharmacy position justification in the academic medical center practice setting
- Differentiate between priorities for operational and clinical oncology pharmacy position justifications in the academic medical center setting
- Describe successful position justification strategies in the academic medical center setting

Community Oncology Practice:
- Explain key concepts in oncology pharmacy position justification in the community oncology practice setting
- Differentiate between priorities for operational and clinical oncology pharmacy position justifications in the community oncology practice setting
- Describe successful position justification strategies in the community oncology practice setting

Electronic Medical Records (Epic)

The goal for this session is to accomplish the following objectives with one speaker per objective:

- Identify important updates in the latest Epic Beacon Upgrades
- Describe the utilization of electronic medical record technology in the management of oral chemotherapy
- Review tools in the electronic medical record to track and measure pharmacy productivity

Oral Chemotherapy

The goal for this session is to have 2-3 speakers accomplish the following objectives:

- Discuss how an oncology clinical pharmacist can help meet the needs for specialty pharmacy accreditation
- Review how to successfully manage oral chemotherapy without an onsite specialty pharmacy
- Describe how an internal specialty pharmacy can be utilized for pharmacy position justification

IV Technology

The goal for this sessions is to have 2 speakers accomplish the following objectives:

- Review various IV preparation tools including IV workflow systems, closed system transfer devices and IV robotics
- Evaluate the efficacy of these tools and justify their use in practice
- Discuss how to measure the impact on workflow, finance, and safety
